

## 2013 Infiniti G37 Center Console Removal

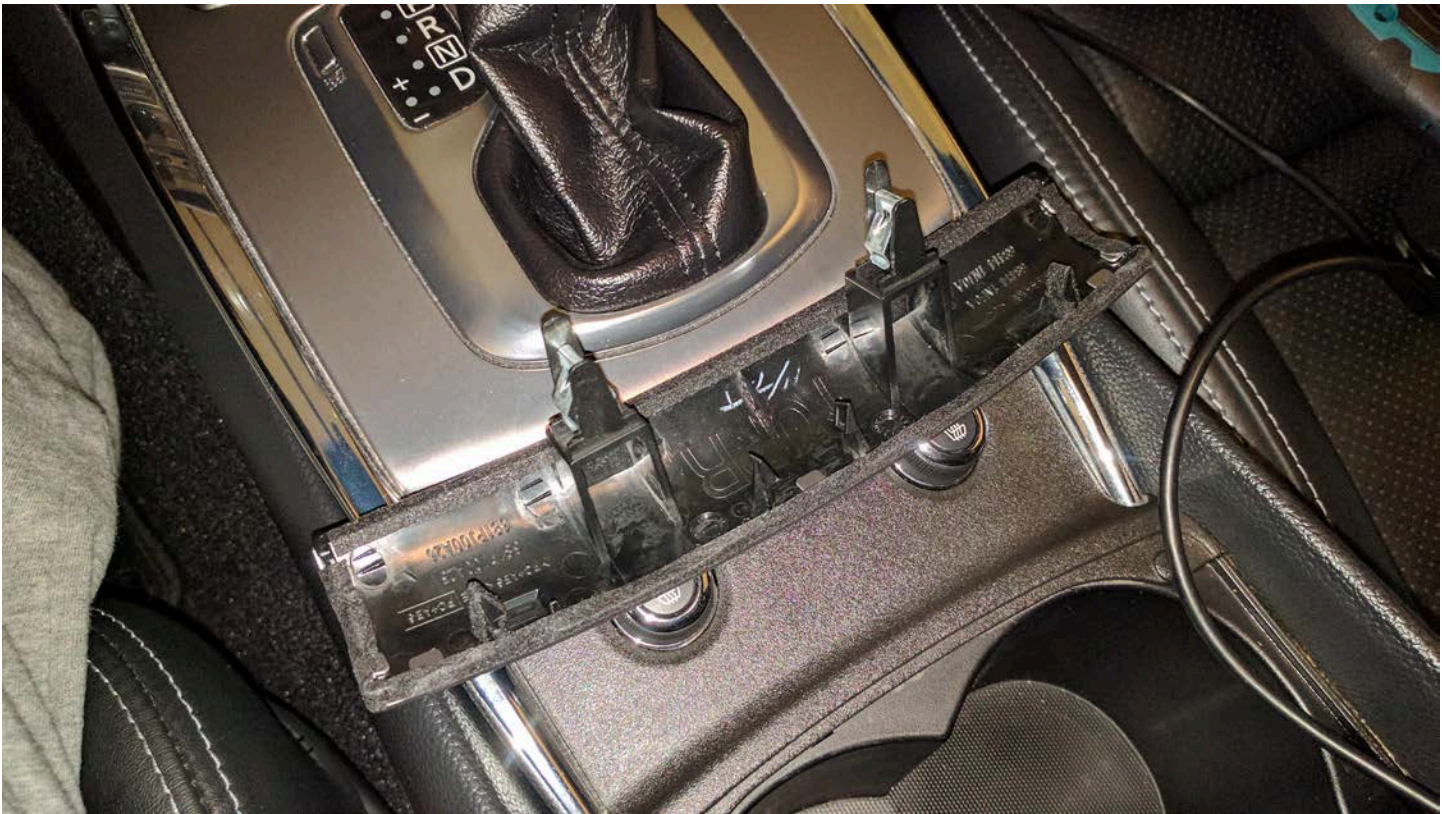

Step 1: Remove front screw cover

Step 2: Lift the shifter by pulling down on the sleeve and pull out clip

Step 3: Left console next to cup holders but first put emergency brake and put into drive to be able to lift this part

Lift left side

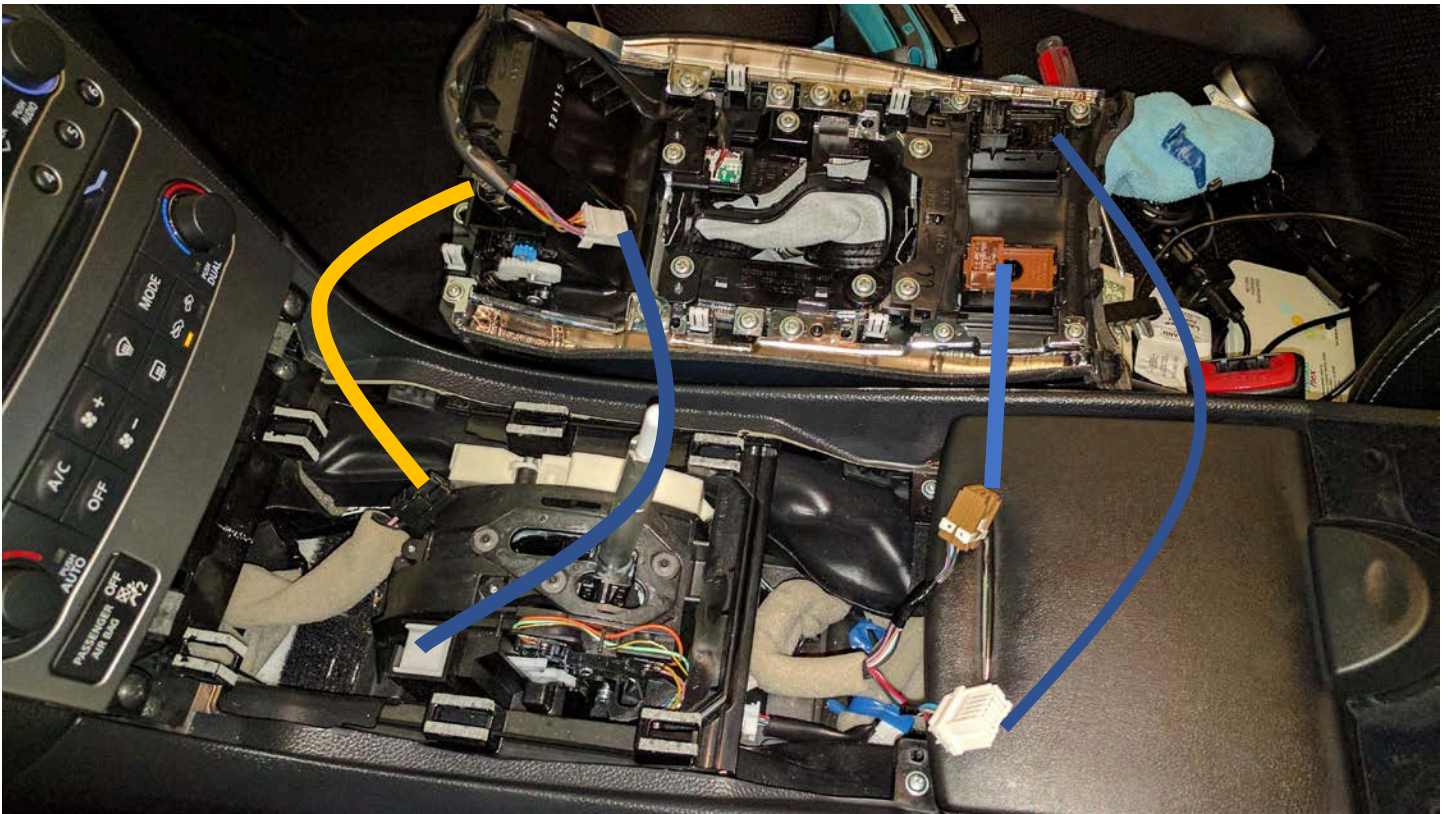

Lift right side

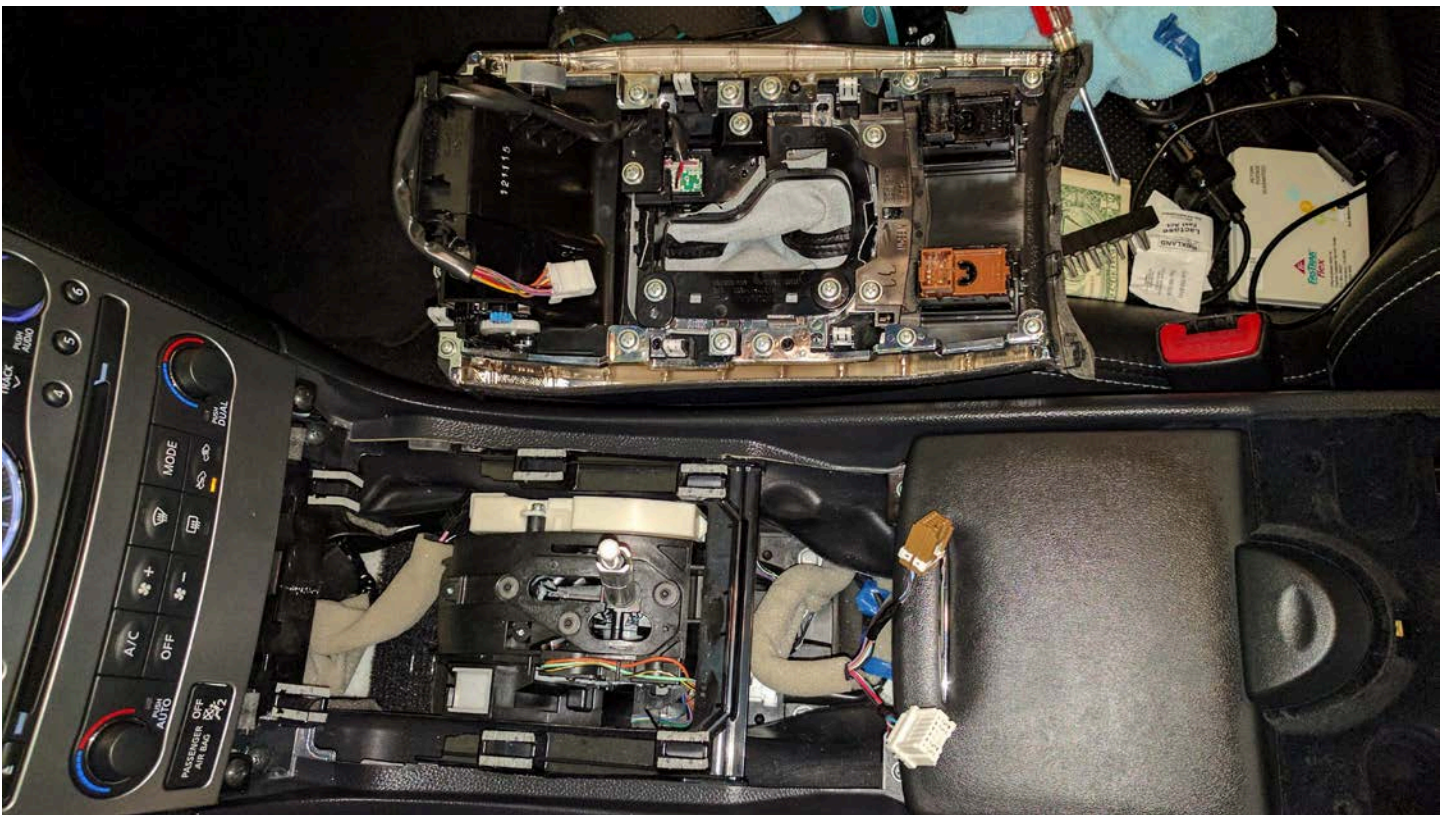

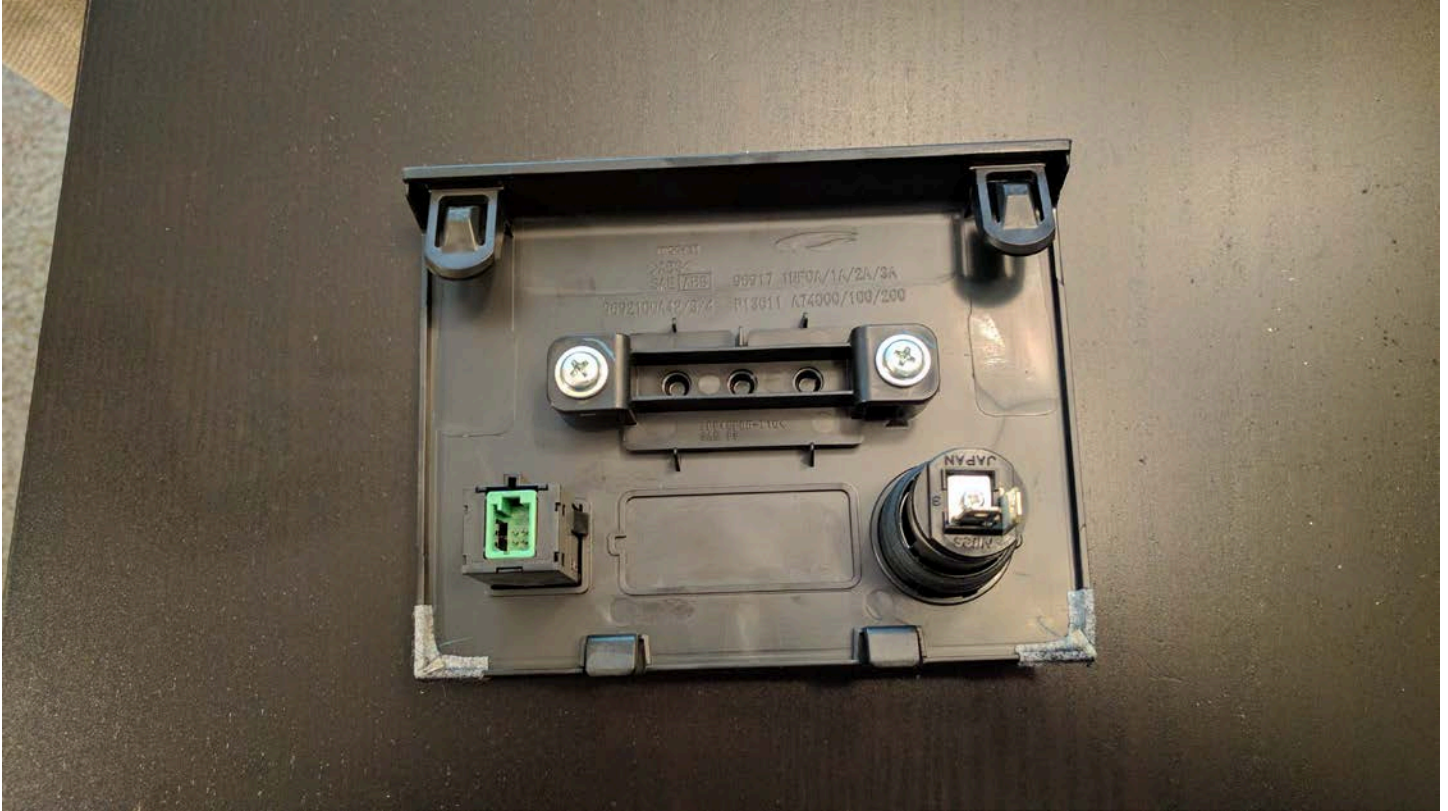

Blue Connections are clipped so you need to push down the connector and then pull to unclip.

Orange Connection is just a pull connection.

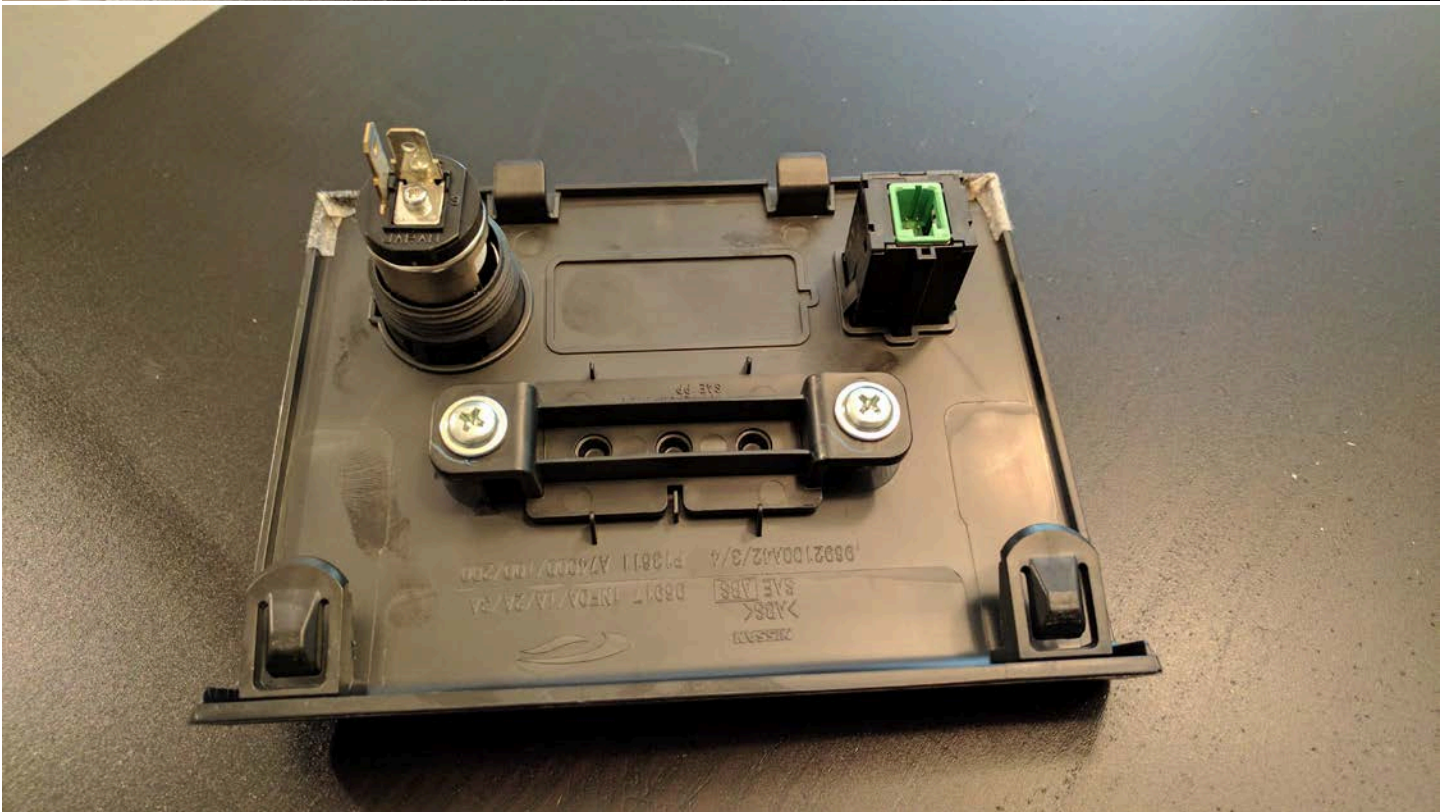

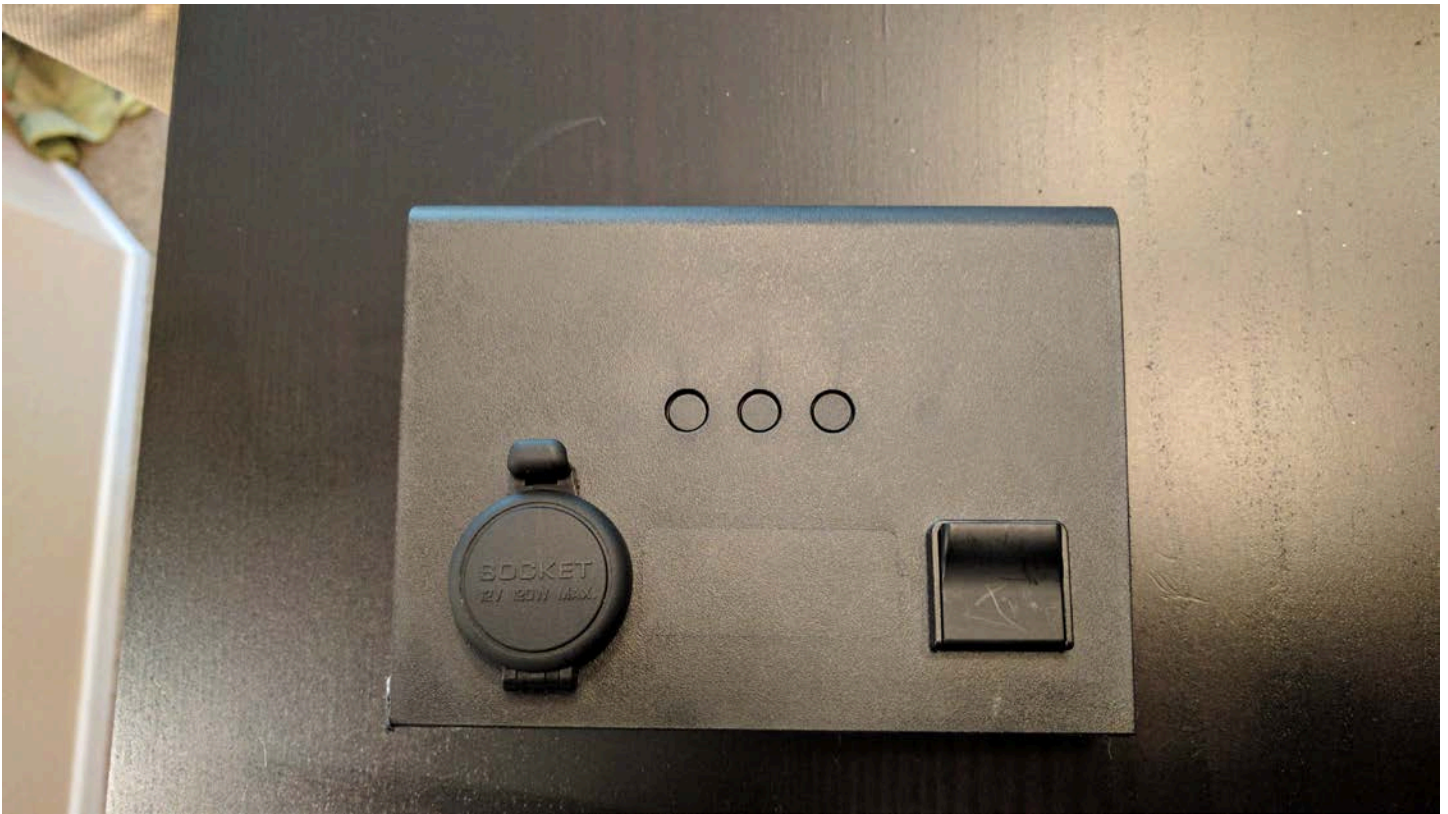

Step 4: Now the part that took more than just a plastic prying piece for me and to be blunt, was a bitch, first look at what the piece looks like(USB/Power) plastic cover in the center console cubby. DO AT YOUR OWN RISK!!!

Now that you have an idea of what it looks like, here is what I did.

Blue: Clip so push little clip down then pull

Orange: Just pull carefully but with force.

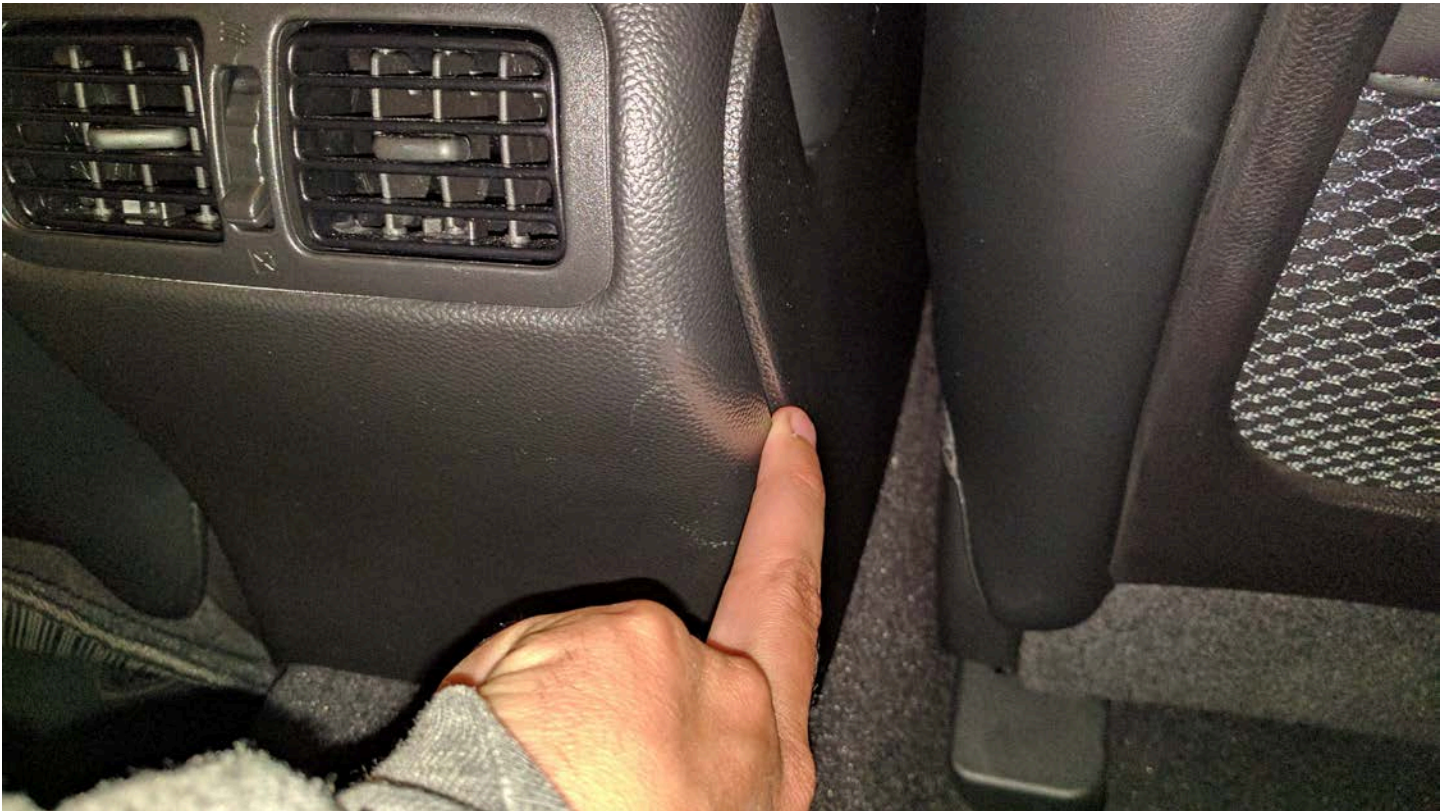

Step 5: Remove rear vent cover

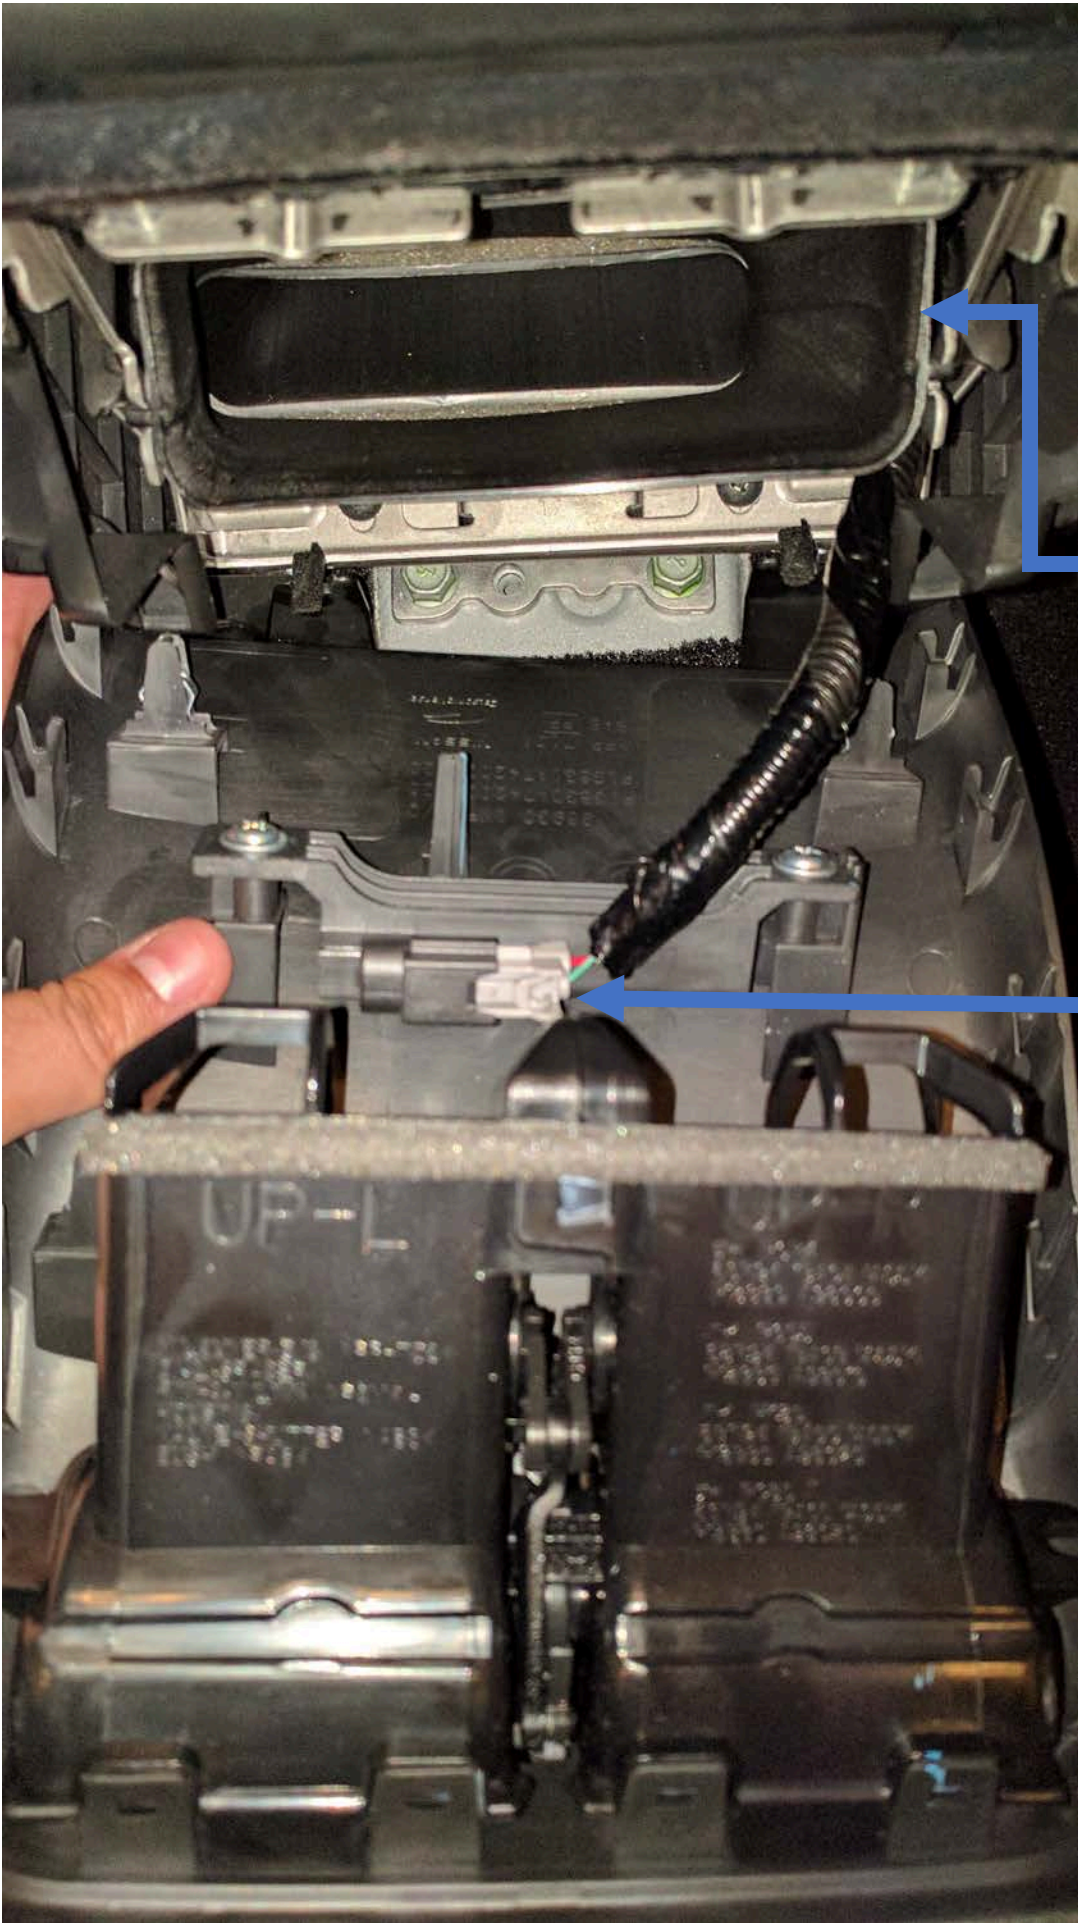

Pull from bottom up

Remove this by sliding it out.

Unclip this and it is zip tied to the center console so be careful when you cut the zip tie.

Step 6: Remove the 4 screws holding down the center console, two front and two back.

And now carefully pull back and up making sure you don't pull on any cables and freedom!

There are 4 screws on bottom for the cupholder and 2 on top, they have notches so make sure you get around them.  
Good luck. Hopefully this helps.
